

The next generation of
global broadband
maritime communications

Iridium Pilot™

Powered by the Iridium OpenPort broadband service, Iridium Pilot gives you exceptional performance, durability and value at sea, anywhere – plus the peace of mind that comes with our five-year limited warranty* and Iridium Pilot Global Service Program.

 **iridium®**
Everywhere

Engineered and built to perform in the toughest conditions

Blazing sun, frigid cold, high winds — Iridium Pilot can handle any weather conditions, anywhere. Powered by the high-speed, high-value Iridium OpenPort broadband service, Iridium Pilot delivers exceptional performance, durability and value at sea, anywhere in the world.

Flexible Data Options

For email, web browsing or social media, the Iridium OpenPort broadband service delivers flexible and highly reliable data services at a value price. Choose from a range of configurable data rates to meet your specific requirements.

Looks After Your Crew

Iridium Pilot's three independent phone lines increase retention by helping you keep the crew happy—there's no need to queue to call friend and family. Affordable prepaid options allow calling even at peak times.

The Iridium Pilot below-decks unit contains three RJ11 jacks, enabling users to make up to three simultaneous voice calls, even during data transmission. Crew calls are easily separated from ship's business calls for simplified accounting.

Powered by Iridium OpenPort® broadband service

Low cost airtime: As a packet switched service, the Iridium OpenPort Service substantially reduces your maritime communications costs compared to circuit switched services. And it offers a wide range of customizable voice and data plans allowing you to choose to suit your needs and your budget—if you don't use a service, you don't pay for it.

High Reliability and Availability:

The unique Iridium constellation of 66 cross-linked Low Earth Orbit (LEO) satellites provides inherent advantages over GEO satellite constellations, delivering robust communications performance. And because the Iridium OpenPort broadband service is not affected by extreme weather, many customers with mission-critical communications requirements rely on it to back up other platforms.
