

SkyFile Mail – Sub Accounts Overview

Skyfile Mail Sub Accounts are additional accounts under your Skyfile Mail registration. For example, your registered Skyfile address may be “vessel@skyfile.com”. Sub-Accounts can be created such as “CAPTAIN.vessel@skyfile.com” or “CREW.vessel@skyfile.com”. Skyfile Mail Sub Accounts are a great way to manage additional mailboxes for your registration.

Your Subaccount name will determine your Internet address. For example, if the registered Skyfile address is “vessel@skyfile.com” and a Subaccount name is CAPTAIN; the internet address will be “CAPTAIN.vessel@skyfile.com”

Sub Accounts are created, edited, configured and deleted via the Configuration > Subaccounts menu option.
