

SkyFile Access

Internet applications at your fingertips

Providing dedicated FTP access, Internet and email, SkyFile Access is a simple, versatile and cost-effective solution.

It helps optimize data transfer from anywhere in the world via a satellite terminal.

On land or at sea, SkyFile Access provides a direct, seamless Internet connection to conduct file sharing, web-browsing and to send and receive emails.

The service is available on all Inmarsat terminals: BGAN, RBGAN, Fleet, Mini-M, GAN, A, B and M. And with no access fee or monthly fee you only pay the airtime.

File sharing with FTP

Benefit from a free-of-charge FTP space, public or private, to store or exchange heavy data files:

- Up to 1 Gigabyte space.
- Access your dedicated space via your web browser or any FTP client: CuteFTP, Filezilla, FTP Explorer, FTP expert, etc.

Personal mailbox and address

We can host your mail box if required and provide you with an individual email address (e.g. "name@skyfile-access.com") to enable you to stay in touch wherever you are:

- Access from all standard email clients: Outlook, Outlook Express, Lotus, Microsoft Outlook, Eudora, etc.
- SMTP, POP3 or IMAP.
- Up to 50 MB mailbox capacity.

Webmail

With the webmail feature, you can easily email from your office on land, from home, an Internet cafe, or from any standard Internet access point.

Internet Access

Enjoy a direct, seamless connection to the Internet from your mobile satellite terminal, providing access to your corporate network.

- Compatibility with any web browser: Microsoft Internet Explorer, Mozilla Firefox, Netscape Navigator, etc.
- Optional web browsing: it is possible to disable this feature if you do not wish to offer it as standard to users of BGAN, R-BGAN and GAN terminals.

Enhanced security

SkyFile Access provides high security with integrated virus protection and spam filters. The system allows messages to be blocked according to email address (black & white lists), email domain name or maximum file size.

Group management

SkyFile Access offers direct group management for email and FTP accounts via a remote administration interface. In just a few clicks it is possible to create, change or delete your account or groups of users' accounts.

Account

Account information

Description Name: arcaindu

Mail information

Email address: arcaindu@skyfile-access.com
Max size per message: 4096 K (0 means unlimited)

Mail notification

Notification mail address: mobilesat@vizada.com

Mail vacation auto-responder

Activate vacation auto-responder: Enabled
Currently on shore. Your msg will be forwarded to my private email.

Mail forwarding

Keep a local copy of forwarded mail: Disabled

size of mail space:
176 K of 500 K
size of ftp space:
165 984 K of 300 000 K

And more

- Extra capacity: additional storage space can be allocated on demand to the FTP space and/or email box.
- Simplicity: no installation required. Simply use the same ID and password to login to your FTP space, webmail and remote administration interface.
- Complementary tools: The dedicated FTP space can also be used to store videos edited and compressed with SkyFile Video, our all-in-one mobile editing studio. Vizada has also developed SkyFile Mail, an enhanced emailing solution enabling data compression, crash recovery and full duplex (simultaneous sending/receiving).
